Professional Summary

Cybersecurity-focused Computer Science undergraduate (CGPA: 8.7) with hands-on SOC experience in Wazuh (SIEM), Shuffle (SOAR), and GLPI (ITSM). Automated workflows handling 187+ daily alerts, improving response time by 70% and reducing false positives by 30%. Developed 20+ detection rules and REST API-based playbooks. Author of IEEE-indexed research under review (ICSETI 2026) and CompTIA Security+ candidate seeking SOC Analyst / Security Engineer roles.

Skills

Cybersecurity SIEM (Wazuh), SOAR (Shuffle), ITSM (GLPI), Incident Response, Alert Triage, Log Analysis, Rule Tuning, Threat Detection, Blue Team Operations

Programming & Scripting Python, Java, Linux (CLI), REST APIs

Web & Databases HTML, CSS, JavaScript, React, MySQL

Soft Skills: Collaborative teamwork, strategic leadership, adaptability under pressure and time management.

Tools & Platforms: TryHackMe, GitHub, Wazuh, Shuffle

Internship

SOC Analyst Intern

Tribastion Technologies Pvt. Ltd. | *May 2025 – July 2025*

Monitored and analyzed **70 security alerts per day.** Automated incident detection and response by integrating **Wazuh (SIEM), Shuffle (SOAR), and GLPI (ITSM)** using REST APIs.Designed and deployed **2 automated playbooks** (Phishing, Brute Force, Suspicious Login).

Developed and implemented **20+ custom Wazuh detection rules** for - Brute-force login detection, Multiple failed logins, Suspicious IP activity, Privilege escalation attempts.

Reduced manual response effort by **60%** and improved incident response time by **70%**. Reduced false positives by **30%** through rule tuning and alert optimization. Automated **58% of ticket creation** with severity-based priority mapping (Low/Medium/High/Critical).Led Wazuh configuration, rule engineering, and full documentation of automation workflows.Deployed Wazuh agents and collaborated with SOC analysts to validate detection logic.

Projects

Cybersecurity Threat Detection & SQL Injection Defence System (GitHub Project | Research-backed Implementation)

Tools / Technologies: Python, SQL, Web Security, Cryptographic Hashing, HTML/CSS

Developed a web-based system demonstrating Blind and Error-based SQL Injection attacks. Reduced vulnerable queries by **48%** using parameterized queries and cryptographic hashing, preventing **3 successful attack attempts** and lowering attack success rate by **33%**. Research documented in IEEE-indexed paper under review (ICSETI 2026).

AI-Assisted Phishing Detection: From Grammar Errors to Behavioural Mimicry

Tools / Technologies: Python, Machine Learning, NLP, LLMs, Data Analysis

Designed a balanced dataset of **1,800–2,400 emails** (legitimate, traditional phishing, AI-generated) using public datasets and controlled AI samples. Implemented Logistic Regression, Random Forest, SVM, and BERT (pretrained embeddings) for multi-class detection. Achieved **92% accuracy** on traditional phishing and improved AI-phishing recall from **60% to 70%** using behavioural features. Framework experimentally validated and documented in research paper.

Smart Traffic Management System (Hackathon Project – 24 Hours) (Patent Filed – Under Process)

Tools / Technologies: Python, Computer Vision, IoT Concepts, Data Analysis

Developed a real-time traffic-density detection and adaptive signal-control system. Filed patent titled: **"Smart Traffic Management System."** Patent accepted and currently under processing. Designed adaptive traffic logic to optimize vehicle flow and reduce congestion.

Education

Sharda University, Greater Noida — **September 2023 – May 2027**

Bachelor of Technology in Computer Science — *8.7 CGPA*

Certifications & Achievements

Google Cybersecurity Professional Certificate
Cisco CyberOps (Training Completed)
CompTIA Security+ (Exam Scheduled – March 2026)
TryHackMe – Top 75% rank | 4 rooms completed | 1 badge earned
Patent filed for Smart Traffic Management System (Under Process).
Best Speaker of the House – Model United Nations (2023).
